Delfin Cupping Issues & Benefits

Abdomen Slimming & Shaping

Tone and renew the look of your abdomen with the use of our Delfin cupping therapy with the added stimulation of the lymphatic system through thermal and cryotherapy as well. We are able to sculpt, tone, and firm the abdomen while defining curves and aiding in the elimination of stored fats.

Issues	Benefits
Lack of definition/curves	Aid in defining and creating contours through specialized movements of localized handheld pressure and cryotherapy
Stored fat / localized fat deposits/ Toxin buildup / Water retention	Breaks Down stubborn fat cells through lymphatic drainage, as well as freezes, results through cryotherapy
Poor metabolism	Boost metabolic function through stimulation of circulation, lymphatic system, and thermal therapies
Flaccid/sagging skin	With several pressure modes this molds the skin and body to look and feel toned, smooth, and firm

With our Non-Invasive and holistic Abdomen Modeling protocol, we define and shape silhouettes through specific movements using localized handheld pressure and cryotherapy. This protocol promotes metabolic purposes through stimulation of circulation, lymphatic drainage, and thermal treatments.

Butt Enhancement & Thigh Slimming

Due to the passage of time, this area of the body loses its firmness and changes in shape due to lack of exercise and a sedentary lifestyle causing the buttocks to flatten and start to sag. With this protocol, the Delfin enhancement cups reshape and tone the buttocks, moving the excess fat to the desired position of the gluteal region.

Issues	Benefits
Flaccid/ sagging skin	Firmer plumper skin is achieved after just one Butt Enhancement treatment.
Flat/undefined buttocks	Reshapes the buttocks through vacuum cupping therapy tools and manipulation of excess fat to desired buttocks area and shape
Poor circulation	Restores circulation health through massaging and vacuum cupping therapy tools stimulating blood flow
Cellulite / dimpling	Reorganizes the structure and placement of adipose tissue while softening subdermal fat
Stretch marks	Promote cell turnover and softening of scarring and stretch marks
Dry/dull skin	Rehydrate skin through removal of toxins and excess dead skin leaving a refreshed glow
Toxic build-up	Stimulates lymphatic drainage to remove toxins stored in the body and skin
Dead skin build-up	Rejuvenate skin through pre exfoliation process and continued massaging for cell turnover

Our Non-Invasive BBL treatment reshapes, shapes, plumps, perks, defines, tones, and lifts the buttocks. The Butt Enhancement and Thigh Slimming Treatment also eliminate toxins from your lymphatic system while also softening and lessening the appearance of scars, stretch marks, and cellulite. Post-treatment your thighs will be slim while your buttocks will be more contoured and shapely.

Hip & Thigh Cellulite Reduction

The Delfin equipment and its knuckle cups are the best alternative to improve the appearance of the skin as its wonderful design gently folds, compresses, and drains the skin of liquids, toxins, and fats through the lymphatic system pain-free and with immediate results.

Issues	Benefits
Cellulite / dimpling	Through the use of specialized cupping such as knuckle cups, this compresses and drains the skin of liquid toxins and fats through the lymphatic system
Fat accumulation/storage	Stimulates lymphatic drainage and reforms and shapes areas of stubborn fat
Poor circulation	Reinvigorates circulation and lymph flow
Sagging / Flaccid skin	Tones / tightens skin with the use of localized pressure cups with strategic pressure and motions.
Toxic build-up	Activates lymphatic drainage and removes waste build-up

Our Cellulite Protocol is pain-free, holistic, and is proven to provide immediate results. This protocol works best on the thighs, inside the knees, arms, buttocks, and stomach. How does it work? The pressurized knuckled cups stimulate your lymphatic system aiding in the breakdown of adipose tissues, which causes the body to form and store excessive amounts of liquids, toxins, and fats—resulting in improved skin texture and tone.

Non-Invasive Liposuction

Issues & Benefits

Non- Invasive Liposuction

Zemits Holistic Bionexis completely non-invasive technologies that directly target the adipocytes and fibroblasts to promote the elimination of localized fatty deposits and firm the skin through natural processes. The combination of systematic suction and lipo roller massage enables the most effective treatment by pulling the targeted area breaking down lymphatic build-up with the roller massage in one of four rotation patterns for different treatment types.

Issues	Benefits
Cellulite / Dimpling/ Stretch Marks	Non-Invasive Liposuction is proven to improve collagen, connective tissue, and sebum production, which aid in the smoothing and reducing of cellulite, dimpling, and stretch marks.
Flaccid / Sagging Skin	Performing Non-Invasive Liposuction and manual lymphatic drainage massage on problem areas not only prevents and decreases the appearance of flaccid/ sagging skin but also results in improved elasticity, firmer, and more youthful skin.
Localized Fatty Deposits	Utilizing the synergy of pulsive vacuum and lipo-roller massage technologies provides direct access to localized fatty cells and deposits.
Poor Circulation / Capillary Congestion/ Skin Issues	Delivering oxygen and nutrients to the circulatory system and skin improves the circulatory system and internal and external layer of the skin, preventing capillary congestion and other skin conditions like rosacea, uneven tone, texture issues, and dull skin.
Toxin and Waste Buildup	Stimulating the muscles with our Non-Invasive Liposuction technology mimics the effects on the lymph vessels. Manual release of these lymph vessels results in natural detoxification, the release of toxic buildup and waste, and water retention.

Swelling / Inflammation/ Puffiness	Successful removal of toxic buildup, waste, and water retention will provide you with a slimmer, more contoured appearance.
------------------------------------	---

Our Non-Invasive Liposuction technology is proven to transform your body! The pulsive vacuum, lipo-roller massage, and manual lymphatic drainage massage techniques Fond & Faye methodologically performed will not only leave your body slimmer and contoured but also detoxified, tightened, with an even tone, texture, and smoother skin.

Main functions of Non-Invasive Liposuction:

- 1- lymphatic drainage stimulation and detoxification
- 2- cellulite/ dimpling/ stretch mark reduction
- 3- skin tightening and rejuvenation
- 4- body contouring
- 5- body shaping
- 6- body slimming

Sollift 6-in-1 Cavitation Issues & Benefits

Ultrasonic 40 Khz Cavitation for the Body

This ultrasonic cavitation handpiece allows for the disruption of cellular membranes in adipocytes or fat cells. It promotes body contouring, slimming, and weight loss. The high pressure on the adipocytes caused by intense ultrasound waves forces those cells to collapse and their fatty contents to leak out into the spaces between cells until they eventually leave the body.

The number of fat cells in an individual never changes throughout life (those existing cells simply grow in size). These fatty contents must be excreted almost instantly, so they are not reabsorbed. With the help of a professional to trigger lymph flow, the lymphatic system excretes these wastes through natural bodily processes.

Issues	Benefits
Unwanted inches and volume	The 40Khz cavitation uses low-frequency ultrasound waves conducted through the skin to the fatty layer below, which emulsifies (is broken up into a liquid substance) for the body to process naturally.
Sedentary fat and slow metabolism	Cavitation transmits low-level ultrasonic waves, which consist of compression and expansion. Expanding fat cells until they are broken down and excreted from the body
Toxic build-up and water retention	The treatment activates lymphatic drainage through ultrasound waves helping lymph fluid pass through the lymph nodes. Bacteria and toxins are then filtered out and destroyed.
Dimpling, Cellulite, and textured skin	Utilizes ultrasonic sound waves to penetrate deep into the tissue and break up and soften cellulite, dimpling, and texture
Flaccid sagging skin	Ultrasonic sound waves re-structure, and contract existing collagen, and stimulate fresh collagen production to give noticeable yet natural results.

Vacuum + Radio Frequency

Vacuum therapy massages the skin to increase blood flow and lymphatic drainage, simultaneously supporting healthy skin and circulation. Collagen and elastin, two proteins essential for keeping the skin tight, firm, and youthful, production are also supported via this treatment. Vacuum therapy is a non-invasive treatment that can reverse the appearance of your skin's age. On this function, two electrodes lie on the rim of the vacuum handpiece. By working in conjunction, these two technologies create even more dramatic tightening and overall skin-improved results.

Issues	Benefits
Poor circulation, elastin levels, and collagen levels	Through thickening, the dermal layer of the skin promotes new collagen production, and the wrinkles are then pushed out, so the skin becomes firmer, and the contours are lifted.
Sedentary fat deposits, slow metabolism	Through deep heating of connective tissue fibers, dermal collagen fibers, and fat cells, as well as the uses of suction, create pressure to release the softened and sedentary fat.
Textured skin, dimpling, and cellulite	Utilizes ultrasonic sound waves to penetrate deep into the tissue and break up and soften cellulite, dimpling, and texture
Built-up toxic waste, softened fat deposits, water retention	Heat achieved through radiofrequency breaks down deep-rooted toxins that are clogging cells and stimulates the excretion of toxins, while vacuum tools help excrete these toxins

BENEFITS OF VACUUM RADIOFREQUENCY:

- Improves circulation of blood and lymph
- Reduces the appearance of cellulite
- Increases metabolism
- Burns fat at a faster rate
- Promotes positive mood
- Improves overall body profile
- Tones and smooths skin

Radiofrequency on the Body

The patented multipolar handpiece works by alternating charges between multiple electrodes. Its handpiece is used primarily for treatments on large areas of the body, such as the legs and abdomen.

Issues	Benefits
Cellulite, Banana roll, saddlebags, loose underarm skin, dimpling, and textured skin	Utilizes ultrasonic sound waves to penetrate deep into the tissue and break up and soften cellulite, dimpling, and texture
Poor collagen, elastin, and nutrient levels	The dermal layer of the skin becomes thickened with the new collagen production, and the wrinkles are pushed out, so the skin becomes firmer, and the contours are lifted.
Water retention and toxic build-up	Heat achieved through radiofrequency breaks down deep-rooted toxins that are clogging cells and stimulates the excretion of toxins.
Dry and dehydrated skin	Supports Hydration in the skin and relieves dryness and irritation

Benefits of Radiofrequency for the Body:

Treats cellulite and tightens skin

Warms the dermis to make subsequent beauty treatments (like cavitation) more effective

Increases skin elasticity and tightness

Can be used on the arms, stomach, legs, and more

Supports healthy collagen production

Non-invasive, safe, and requires no downtime

Features cumulative effects with further treatments

Radiofrequency on the Face

Bipolar Radiofrequency (RF) energy is an advanced scientific method for non-surgical tightening the early signs of loose, sagging, or aging skin. RF energy alone is primarily used to treat flaccid skin by tightening. It is best suited to those with mild to moderate sagging of facial tissues. It is used to treat the forehead, under the eyes, cheeks, mid-face, jawline, and neck.

The handpiece is slowly rotated over the target area, transmitting radio waves through the upper layers of the skin to the dermis, heating the dermis to between 100 and 120 degrees Fahrenheit without burning the skin surface. This process causes tissue retraction where the generated heat causes local contraction of the collagen fibers to tighten the skin immediately. By heating the dermis new collagen production is stimulated. RF treatments improve circulation, improving the blood and lymphatic flow. This helps with a better oxygen supply and greater toxin clearance to further reduce the effects of aging.

Issues	Benefits
Flaccid and sagging skin	Connective tissue contracts to improve the skin's contour, texture, and architecture.
Fine lines, wrinkles, and signs of aging	Softens and reduces the appearance of fine lines and wrinkles through improved oxygen supply and removing toxins
Poor collagen, circulation, and elastin levels	Collagen fibers contract and multiply, which firms and improves laxity.
Hyperpigmentation, dark spots, and uneven tone	Lightens pigmentation by stimulating your body to produce new collagen, creating a more consistent color
Textured, uneven skin, Acne scarring, dimpling, and scars	Utilizes ultrasonic sound waves to penetrate deep into the tissue and break up and soften scarring, dimpling, and texture

Microcurrent for Face

Microcurrent is a type of electrotherapy which delivers micro-currents that mimic the body's natural currents. When these micro-currents are delivered into the skin, the body interprets them as natural, and it is able to stimulate the facial muscles. Specifically, microcurrent is extremely beneficial for decreasing puffiness and lifting muscles. It is definitely, a less invasive procedure than Botox or fillers. By combining microcurrent with Lightwave LED therapy, the benefits extend even further, enhancing the rejuvenation of the skin.

Issues	Benefits
Facial structure lacking definition	This treatment causes muscles to contract and is re-trained to lift and sculpt the facial structure.
Weak and or loose muscles of the face, Double chin, Flaccid, and sagging skin	Muscle tissue contracts and tightens to improve the skin's contour, elasticity, and architecture.
Poor cellular metabolism, elastins, and collagen	Speeds up collagen and elastin production to improve levels
Dull and dehydrate skin	Restores a glowing, bright complexion with improved levels of hydration
Water retention and puffiness	Flushes out water retention and drains lymphatic build-up while lifting and tightening muscles at the same time.
